

Level sensing relative and absolute pressure transmitter type 713

Pressure range
0 ... 0.6 - 16 bar

The pressure level transmitter type 713 is used for continuous fluid level measurement of ground and drinking water. The compact design allows the transmitter to be used in applications with restricted access as small as $\frac{3}{4}$ inch i.d. pipe.

As well as a current output the pressure level transmitter type 713 has been enhanced with energy efficient ratiometric and digital outputs making it ideal for battery powered applications.

The pressure level sensor 713 is based upon the well proven ceramic technology developed by Huba Control over 20 years ago.

- Ceramic sensor Al_2O_3 99.6%
- Continuous level measurement
- Suitable for drinking water
- Available with integrated temperature measurement
- Applicable in $\frac{3}{4}$ inch pipes
- Excellent linearity and long term stability

Calculation of level

General level with relative pressure sensor:
$$h = \frac{\Delta p}{\rho \cdot g}$$

General level with absolute pressure sensor:
$$h = \frac{P_{TS} - P_{Baro}}{\rho \cdot g}$$

which
$$P_{TS} = \frac{U_{TS} - U_{TS_NP}}{U_{TS_EW} - U_{TS_NP}} \cdot (P_{TS_EW} - P_{TS_NP}) + P_{TS_NP}$$

and
$$P_{Baro} = \frac{U_{Baro} - U_{Baro_NP}}{U_{Baro_EW} - U_{Baro_NP}} \cdot (P_{Baro_EW} - P_{Baro_NP}) + P_{Baro_NP}$$
 Using a second level sensor as barometric air pressure sensor

For level sensor with current output use nominal signal values for I_{TS} ... instead of variables U_{TS} ... (resp. I_{Baro} ... instead of U_{Baro} ...)

Simplification of formula for level sensor with ratiometric output:

$$P_{TS} = \frac{U_{TS} - 0.1 \cdot U_{IN}}{0.8 \cdot U_{IN}} \cdot (P_{TS_EW} - P_{TS_NP}) + P_{TS_NP}$$

$$P_{Baro} = \frac{U_{Baro} - 0.1 \cdot U_{IN}}{0.8 \cdot U_{IN}} \cdot (P_{Baro_EW} - P_{Baro_NP}) + P_{Baro_NP}$$
 Using a second level sensor as barometric air pressure sensor
